Executive Summary

*Backend and GenAI Engineer with a strong foundation in data structures, algorithms, and software development. Proficient in **Python, Java, JavaScript, Node.js, Express.js**, and experienced in building **microservices** and **REST APIs**, **RAG Pipelines**, **AI Systems**. Successfully developed serverless platforms and cloud deployments using **AWS**. Eager to leverage technical expertise to deliver scalable backend and AI solutions.*

Technical Skills

Languages: Python, Java, C, C++, JavaScript

Developer Tools: Git, Postman

Backend Technologies: Node.js, Express.js, Docker, MongoDB, SQL, REST APIs

AI Technologies: Vector Databases RAG Pipelines, Embeddings, LangChain

Cloud: AWS (S3, EC2, Lambda, RDS, VPC, IAM)

Soft Skills: Agile Collaboration, Communication, Problem Solving, Root Cause Analysis, Teamwork

Experience

Tech Intern | *IcuriousAI*

Oct 2025 - Dec 2025

- Conducted in-depth research on the MathDial dataset to improve conversational reasoning in AI models for mathematical problem-solving and educational use cases.
- Analyzed dataset structure, pedagogical dialogue acts, and data utilization strategies to enhance model training and response quality.
- Created a pull request to integrate speech-to-text (STT) functionality using WebSockets with the OpenAI API for real-time speech input processing.
- Explored best practices for integrating Generative AI techniques, including prompt engineering strategies and model interaction patterns.

Projects

VisionAI-AI Based Media Analysis | *NodeJs, AWS, MongoDB, ExpressJs*

June 2025

- Built a **serverless** image processing pipeline using Sharp, reducing average image size and improving load times.
- Integrated AI-powered analysis via **AWS Rekognition**, automating object detection and reducing manual tagging effort.
- Deployed backend as serverless architecture using **AWS Lambda and API Gateway**, achieving 99.9% uptime and reducing infrastructure management overhead.
- Developed **RESTful APIs** with **Express.js**, increasing backend response efficiency and decreasing API latency.

DocuQuery-RAG based PDF Insights | *NodeJs, RAG, MongoDB, LangChain*

June 2025

- Integrated **Gemini API** for LLM-based query processing, enabling cost-effective AI responses and reducing API expenses by 100%.
- Designed and implemented a **RAG-based** PDF retrieval system with **Node.js** backend, allowing efficient semantic search and context-aware answers.
- Developed scalable **backend architecture** for file ingestion, chunking, and vector storage using **chromaDB embeddings**, improving query throughput by 40%.
- Optimized **LLM response pipeline** with message history management and embedding search, enhancing AI answer relevance and reducing redundant API calls by 35%.

Education

VIT - AP University

2023 - 2027

Btech in Computer Science with Specialization in Artificial Intelligence and Machine Learning

Amaravati, Andhra Pradesh

Certifications/Achievements

- LeetCode 1461 (max) rated**
- CodeChef 1128 (max) rated**
- The Complete Web Development Bootcamp 2023 - Udemy
- Machine Learning Specialization - Stanford Online (Coursera)
- BlackBucks Certified DevOps Engineer - BlackBucks
